Executive Summary

The Public Utility Research Center (PURC) requested the assistance of the Shimberg Center for Affordable Housing (Shimberg Center) in estimating the number of Florida households that qualified for Lifeline and Link-Up America (Link-Up) for the years 2000 through 2005. Lifeline and Link-Up provide subsidies to low-income telephone subscribers under the auspices of the Federal Communications Commission.

Based on Florida eligibility criteria, the Shimberg Center estimated the number of eligible households using a combination of statistical techniques and program data. During the period 2000 through early 2005, Florida's eligibility criteria for the two programs included the condition that household income be at or below 125 percent of the federal poverty guideline (FPG). In 2005, a policy change raised the income criterion, allowing the inclusion of households at or below 135 percent of FPG. BellSouth, Sprint, and Verizon adopted the 135 percent of FPG criterion, while other telephone companies continue to use the 125 percent of FPG criterion. Participation in one or more of certain social programs also triggers eligibility regardless of whether the household is at or below 125 or 135 percent of FPG. These programs include Temporary Assistance to Needy Families, Food Stamps, Medicaid, Low-Income Home Energy Assistance Program, Supplementary Security Income, Federal Public Housing Assistance (Section 8/Housing Choice Vouchers), National Free School Lunch Program, and Bureau of Indian Affairs programs.

This report contains a detailed explanation of how the Shimberg Center estimated households at or below 125 and 135 percent of FPG. Table 2 of the report shows the number of households in Florida by the 125 and 135 percent of FPG criteria for the years 2000 through 2005. Additional careful statistical analysis of eligibility based on the various social programs estimated the number of unduplicated households meeting the criteria to receive Lifeline and Link-Up assistance. Table 6 in the report summarizes eligible households using both the 125 percent of FPG and 135 percent of FPG baselines and additional households eligible for Lifeline and Link-Up arising from social program participation for the years 2000 through 2005.

Using the 125 percent of FPG as the baseline criterion, 1,156,788 households were eligible for Lifeline and Link-Up in Florida in 2005. Using the 135 percent of FPG baseline, there were 1,251,174 eligible households in Florida in 2005.

The social programs that contribute the highest number of eligible households using the baseline income criteria of 125 and 135 FPG are those administered by the Department of Children and Families (DCF), namely, Temporary Assistance to Needy Families, Medicaid, and Food Stamps.

Using the 125 percent of FPG baseline, DCF-administered programs received by those above the baseline made up nine percent of all Lifeline and Link-Up-eligible Florida households in 2005. Using the 135 percent of FPG baseline, eligibility by households above the baseline triggered by DCF program participation were slightly more than six percent of total Lifeline/Link-Up eligible Florida households in 2005.

Section 8/Housing Choice Voucher recipients above the baseline income of 125 percent made up approximately three-tenths of one percent of all Lifeline/Link-Up Florida households in 2005. When using the 135 percent baseline, they made up one-half of one percent.

Participation in Low-Income Home Energy Assistance Program among households with incomes above the baseline of 125 percent of FPG made up three-tenths of one percent of total Lifeline/Link-UP eligible households. Using the 135 percent of FPG baseline yielded two-tenths of one percent of Florida's eligible households in 2005.

Detailed county-level estimates at each income level and among social program participants are presented in the Appendix to this report. The Appendix also contains detailed information at the county level on household characteristics such as age, race and ethnicity, status as a female-headed household, household tenure (ownership versus renting), and level of education of the head of household.

A COUNT OF THE NUMBER OF HOUSEHOLDS IN FLORIDA THAT QUALIFY FOR LIFELINE TELEPHONE DISCOUNTS, 2000 TO 2005

Introduction

The Public Utility Research Center (PURC) requested the assistance of the Shimberg Center for Affordable Housing (Shimberg Center) in estimating the number of Florida households that qualified for Lifeline and Link-Up America (Link-Up) for the years 2000 through 2005. The Lifeline and Link-Up programs in Florida are part of nationwide programs created by the Federal Communications Commission (FCC) in 1984 to provide low-income consumers access to affordable telephone service. In general, the Lifeline program reduces the monthly telephone bill by up to \$13.50. The reduction assumes the form of a credit and is deducted from the bill for basic telephone service. The Link-Up program reduces the cost of telephone installation by up to 50 percent. That reduction assumes the form of a credit and is deducted from the service installation charge. Florida began providing Lifeline assistance in 1994.

Based on Florida eligibility criteria, the Shimberg Center estimated the number of eligible households using a combination of statistical techniques and program data. From 2000 through the early part of 2005, Florida's eligibility criteria included households at or below 125 percent of the federal poverty guideline (FPG), as well as households participating in certain social programs described below. In 2005 the income criterion was raised to those households at or below 135 percent of FPG (see Florida Public Service Commission [FPSC], 2005a). Participation in one or more of the

following social programs also triggers Lifeline and Link-Up eligibility in Florida, regardless of whether the household is at or below 125 or 135 percent of FPG:¹

1. Temporary Assistance to Needy Families (TANF)
2. Food Stamps
3. Medicaid
4. Low-Income Home Energy Assistance Program (LIHEAP)
5. Supplementary Security Income (SSI)
6. Federal Public Housing Assistance (Section 8/Housing Choice Vouchers)
7. National Free School Lunch Program (NSL)²
8. Bureau of Indian Affairs Programs

This report is organized as follows: The next section outlines the methodology the Shimberg Center used for estimating the number of households at or below 125 percent of FPG and the number at or below 135 percent of FPG. The following section describes the approach for estimating the total number of households eligible for Lifeline and Link-Up programs. This was done by calculating the number of households that qualify for Lifeline and Link-Up under one or more of the social programs listed above, but not under the income criteria. Lastly we examine the relative importance of social program criteria and income criteria for qualifying households for Lifeline and Link-Up.

¹ See FPSC, 2005b.

² NSL participation provides eligibility for BellSouth, Sprint, and Verizon customers.

Methodology for Estimation of Households at or Below 125 and 135 Percent of FPG

The first step in estimating the number of Florida households eligible for Lifeline and Link-Up assistances was to estimate the total number of households at or below 125 and 135 percent of FPG for the period 2000 through 2005. This estimation was performed at the county level and aggregated upwards to a statewide total. In addition to estimating the total number of households falling at or below 125 and 135 percent of FPG, the Shimberg Center also made estimates at the county and statewide levels of households at or below 125 and 135 percent of FPG based on certain demographic indicators, such as age, race and ethnicity, female-headed household, tenure (homeownership versus renting), and level of education. The methodology for estimating total number of households is presented next, followed by additional detail regarding the method for estimating households based on demographic factors.

Household estimations were made based upon data contained in the Census STF-3 release, as well as data found in the Census Public Use Microdata Set. The estimation methodology is based on the concept of headship and household formation rates for 2000 through 2005. A household is essentially equivalent to an occupied housing unit, and the headship rate is the rate by which the population converts itself into households. The use of household formation rates for this purpose involves the following definitions and assumptions:

- One member of a household is considered the representative of that household and is referred to as the householder.
- The percentage of the population in a given age group who are householders is the household formation rate in that age group. In other words, this percentage represents the propensity of persons in that age group to be household heads.
- Household formation rates allow the conversion of the population of an age group into households. Different age groups have different propensities for forming households. Generally, the older the age group, the greater the household formation rate. Thus, as the age structure of the population shifts, the number of households that a given population would yield would also change.
- While household sizes declined significantly in the 1970s and continued to decline more slowly in the 1980s, the rate of decline slowed significantly during the 1990s. Further, factors that led to changes in household size do not exhibit a clear and convincing pointer to the direction of future change. The fundamental assumption in the construction of household estimates is that household formation rates and the distribution of household characteristics remained constant in their 2000 proportions across the 2000 through 2005 time period. Estimates and projections of households are therefore based on age-specific householder (headship) rates. These headship rates are applied to the age-specific population projections.

The steps described below were used to create the estimates of households at or below 125 and 135 percent of FPG:

Step 1:

Create county population by age estimates for 2001, 2003 and 2004 by interpolating between estimates for 2000 and 2002 and between estimates 2002 and 2005. The age categories are: 15-24, 25-34, 35-54, 55-64, 65-74, 75 and over.

Step 2:

Calculate the Base household formation rate for year 2000 by county:

$$\text{Household formation rate (county)} = \frac{\text{Household Count of Tenure by Age (county)}}{\text{Population by age (county)}}$$

For example, the household formation rate for the following household type:

$$\text{renter 15-24 years old} = \frac{\text{\# of renter households with a householder that is 15-24 years old (year 2000)}}{\text{\# of persons 15-24 years old (year 2000)}}$$

Step 3:

Create 2001 – 2005 county estimates of households by tenure and age. For example, using the 15-24 year old renter household from step #2, the 2001 estimate of such households is:

$$\text{renter 15-24 years old Household formation rate (from step \#2)} \times \text{population of persons 15-24 years of age in 2001 (from step \#1)}$$

Step 4:

Create the following cross-tabulated ratios using the 2000 Census Public Use Microdata Sample (PUMS):³

$$\frac{\text{tenure by age by race/ethnicity by gender by education level by income}}{\text{tenure by age}}$$

The number of categories for each characteristic is displayed in parentheses. The number of combinations is calculated as:

$$\text{tenure (2)} \times \text{age (6)} \times \text{race/ethnicity (4)} \times \text{gender (2)} \times \text{education level (5)} \times \text{income (3)}$$

³ Public Use Microdata Samples (PUMS) derived from 2000 Census data provide detailed individual records for five percent of people and housing units within a given geographic area. Other PUMS datasets also exist, but were not part of these calculations.

Step 5:

Create county estimates of households by tenure, age, race/ethnicity, gender, education level, and income by multiplying the household estimates from step #3 by ratios from step #4.

These steps created estimates of households eligible for Lifeline assistance distributed across socio-demographic characteristics. From these estimates, an aggregate estimate of households at or below 125 percent of FPG and 135 percent of FPG were created for each county and the state as a whole.

Lifeline and Link-Up income categories are defined based on the FPG, while the Census reports income in ranges. In order to create estimations based on a percentage of FPG, it was necessary to interpolate data to determine the number of households falling at or below 125 or 135 percent of FPG. To qualify for Lifeline and Link-Up in Florida prior to the eligibility policy change in 2005, a household must have had an income falling at or below 125 percent FPG. In 2005, the income criterion was raised to 135 percent of FPG for BellSouth, Sprint, and Verizon. The other telephone companies continue to use the 125 percent of FPG criterion. The income results obtained from Census data were measured against federal poverty guidelines for each year during the period 2000 through 2005. The guidelines for that period are shown in Table 1 below.

Table 1: Federal Poverty Guidelines, 2000-2005

Persons in Family Unit	2005	2004	2003	2002	2001	2000
1	\$9,570	\$9,310	\$8,980	\$8,860	\$8,590	\$8,350
2	12,830	12,490	12,120	11,940	11,610	11,250
3	16,090	15,670	15,260	15,202	14,630	14,150
4	19,350	18,850	18,400	18,100	17,650	17,050
5	22,610	22,030	21,540	21,180	20,670	19,950
6	25,870	25,210	24,680	24,260	23,690	22,850
7	29,130	28,390	27,820	27,340	26,710	25,750
8	32,390	31,570	30,960	30,420	29,730	28,650
For each additional person, add	\$3,260	\$3,180	\$3,140	\$3,080	\$3,020	\$2,900

Sources: *Federal Register*, 2005, 2004, 2003, 2002, 2001, 2000.

Table 2 presents the number of households in Florida by income level (at or below 125 percent of FPG or at or below 135 percent of FPG) for the years 2000 through 2005, as estimated by the Shimberg Center.

Table 2: Number of Households in Florida by Income Level, 2000-2005

	At or below 125 Percent FPG Number of Households	At or below 135 Percent FPG Number of Households
2000	953,718	1,067,881
2001	972,977	1,089,435
2002	992,864	1,111,635
2003	1,009,606	1,130,260
2004	1,027,042	1,149,806
2005	1,044,313	1,168,846

In 2005 households at or below 125 percent of FPG represented slightly more than 15 percent of all Florida households. Those at or below 135 percent of FPG represented just above 17 percent of all households statewide.

Table 3 presents demographic characteristics of low-income households in Florida as estimated by the Shimberg Center. Specifically, Table 3 presents the number of households at or below 125 percent of FPG or at or below 135 percent of FPG arranged by age, race and ethnicity, status as a female-headed household, household tenure (homeownership versus renting), and level of education of the head of household.

Table 3 shows that the majority of households at or below the Lifeline and Link-Up income criteria are headed by persons at least 55 years old (73 percent). Further, the majority of these households are headed by women (56 percent). Most household heads in this group have no education beyond high school (70 percent).

Table 3: Demographics Characteristics of Low-Income Households in Florida, 2005

Household Characteristics	Florida Households by Income Level			
	At or below 125 percent of FPG		At or below 135 percent of FPG	
	Number	Percent of Total	Number	Percent of Total
Age				
25 to 54	96,228	9.2	105,186	9.9
55 to 74	477,100	45.6	531,291	45.4
Over 74	286,082	27.4	319,264	27.3
Race/Ethnicity				
African-American	247,221	23.6	268,892	23.0
Hispanic	212,425	20.3	236,709	20.2
White	545,065	52.1	619,399	52.9
Other	40,899	3.9	45,344	3.9
Female Head of Household	590,112	56.4	652,243	55.7
Own/Rent				
Own	495,114	47.4	567,116	48.5
Rent	550,496	52.6	603,228	51.5
Education				
No HS Diploma	427,437	40.9	470,769	40.2
HS Diploma	311,626	29.8	352,834	30.1
Other*	306,547	29.3	346,741	29.6

* "Other" represents those who have some college, a bachelor's degree, or graduate degree.

Methodology for Estimating All Eligible Households

As described earlier in this paper, eligibility for Lifeline and Link-Up assistance may be established through participation in a number of social programs. Because some of these programs have income eligibilities that exceed 125 percent of FPG or 135 percent of FPG, it was necessary to examine the eligibility criteria for each of the relevant programs, as well as data reflecting the number of program participants. These programs include TANF, Food Stamps, Medicaid, LIHEAP, SSI, Section 8/Housing Choice Vouchers, and NSL. Eligibility for Bureau of Indian Affairs programs is based on membership in a tribe formally enrolled with the federal Office of Tribal Services. Although the 2000 Census indicates that Florida is home to more than 53,000 Native Americans, the Office of Tribal Services indicated in May 2005 that there are no federally-enrolled tribes in Florida. Thus, there is no Florida-based population eligible for Bureau of Indian Affairs programs.

Temporary Assistance to Needy Families (TANF)

Information provided by the Florida Department of Children and Families indicates there are multiple criteria through which households may qualify for TANF assistance. Those eligible for TANF are defined as needy by having an income below 200 percent of the FPG. Eligibility guidelines for TANF also detail additional criteria, including being victims of domestic violence, individuals eligible for Temporary Cash

Assistance (TCA), prior recipients of TANF with incomes below 200 percent of FPG, and adoptive families with special needs children who meet the 200 percent cutoff (DCF, 2003).

Food Stamps

Food Stamp eligibility is determined based on income and other family resources. A household must have a total gross monthly income less than or equal to 130 percent of FPG and/or a total net monthly income less than or equal to 100 percent of FPG. Table 4 details eligibility based on number of people in household and gross income and/or net income. If all household members receive TANF or SSI, no income requirements need to be met to receive Food Stamps.⁴

Table 4: Income Guidelines for Food Stamps, 2005

Number in Household	Gross Monthly Income	Net Monthly Income
1	\$1,037	\$798
2	\$1,390	\$1,070
3	\$1,744	\$1,341
4	\$2,097	\$1,613
5	\$2,450	\$1,855
6	\$2,803	\$2,156
7	\$3,156	\$2,428
8	\$3,509	\$2,700

Source: U. S. Department of Agriculture (USDA), 2005a.

⁴ See USDA, 2005a; 2000.

Medicaid

Medicaid eligibility involves a complex array of criteria that are dependent upon household situation. These criteria apply to low-income families with children, pregnant women, non-citizens with medical emergencies, and elderly and/or persons with disabilities not currently receiving SSI. Medicaid requirements are established by each state. A comprehensive review of eligibility guidelines for key groups can be found in U.S. Department of Health and Human Services, 2005.

Unduplicated Count of TANF, Medicaid and Food Stamp Recipients

Many households receiving TANF also receive Food Stamps and Medicaid. In addition, a large proportion of these households have incomes at or below 125 or 135 percent of FPG. Therefore, it was important to produce an unduplicated count of participants in these programs. The Department of Children and Families (DCF) supplied the Shimberg Center with participation data for the TANF, Medicaid, and Food Stamp programs for the years 2003 through 2005. Data for prior years was not available in detailed form due to internal data overwriting procedures.

DCF data are reported by individual recipient, rather than by household. In order to group recipients into households, the Shimberg Center made use of the DCF case management number. DCF indicated that this number is typically applied to all of those who make up a household for eligibility in programs administered by DCF. Further, this identifier remains the same across all programs in which an individual participates.

Once data for 2003 through 2005 were grouped into households, a count was made of the number of persons in each household. This count was necessary in order to compare household income with federal poverty guidelines. Household incomes across programs showed some variation because different programs exclude different items from qualifying income. Therefore, the Shimberg Center used the highest reported income of any given household as being most likely to be representative of actual household income. Once household size and income were determined, a comparison was made with the federal poverty guidelines tables for the relevant years, and household income was expressed as a percentage of FPG.

Because the baseline income level triggering Lifeline and Link-Up program eligibility changed from 125 percent of FPG to 135 percent of FPG during the period covered by this study, the relevant households in the DCF datasets were those with incomes between 125 and 135 percent FPG and those with incomes above 135 percent FPG. Households were grouped by county based on the address information provided by DCF. Results were then summed to provide a statewide figure.

As previously indicated, detailed data for the years 2000 through 2002 were not available. Therefore, the Shimberg Center estimated data for these years by applying the observed growth trends for each county for the period 2003 through 2005. County-level results were summed to provide statewide figures.

Low-Income Home Energy Assistance Program (LIHEAP)

Households with incomes at or below 150 percent of FPG are eligible for participation in LIHEAP. Households may be served in multiple ways through LIHEAP. For instance, they may receive crisis assistance with a delinquent energy bill in winter or summer or in both seasons. They may also receive assistance to help them with energy efficiency issues. Finally, assistance may be provided in the event of a disaster.

The DCA provided annual report data from federal fiscal year 2000 through 2005. These data categorized households by income category, as well as by type of assistance provided. They also included an unduplicated number of households assisted from all programs (e.g., winter crisis, summer crisis, and disaster). Detailed data on individual households and their characteristics were not available.

The relevant income categories for adding households to the baseline 125 and 135 percent of FPG estimates produced by the Shimberg Center were for those households above 125 percent of FPG. DCA's income categories included 126 percent to 150 percent of FPG and above 150 percent of FPG. The following steps were used to produce estimates of the number of households that should be added from the LIHEAP program to the baseline estimates:

- (1) Data in income categories were not presented as unduplicated counts. Therefore, it was necessary to determine for each year in the time series the proportion of unduplicated households served to total households served by summer crisis, winter crisis, and disaster programs within LIHEAP. This was accomplished by summing the data for all program types, then dividing that result into the number reported as unduplicated households served for that year. This provided a proportion of unduplicated to total households.

- (2) The Shimberg Center then summed the data (summer crisis, winter crisis, and disaster) within each of the two relevant DCA income categories (126 percent-150 percent of FPG and above 150 percent of FPG) to get a total for each year. The Shimberg Center then estimated an unduplicated count within each income category by multiplying the totals within each category for each year by the relevant year's proportion of unduplicated to total households derived from step 1.
- (3) For adding LIHEAP households to the baseline 125 percent FPG estimates, the total results of step 2 above provided the additional households. For producing 135 percent of FPG estimates, however, an additional step was necessary. The Shimberg Center assumed that households served in DCA's 126 percent to 150 percent category were evenly distributed. The spread in the DCA category is a full 25 percentage points. The relevant area for this analysis was the distribution from 126 percent through 135 percent of FPG or ten full percentage points. The ratio of the 126 percent to 135 percent portion of the distribution to the entire 126 percent to 150 percent income category was 0.40. This ratio was applied to results of the unduplicated estimates for the 126 percent to 150 percent income categories for all relevant years as calculated in step 2.
- (4) Once the Shimberg Center obtained an estimate of households receiving LIHEAP with incomes from above 125 percent of FPG to 135 percent of FPG in step 3, it deducted this number from the 126 percent to 150 percent results to arrive at a figure that represented households above 135 percent to 150 percent of FPG. To these results, the Shimberg Center added the results obtained for households above 150 percent of FPG in step 2.
- (5) Once total results were obtained for the state of Florida, they were distributed to each county using each year's county population divided by total state population as the ratio for arriving at individual county-level LIHEAP households in the relevant income ranges. Population for 2000 was obtained from Census 2000; population estimates for 2001 through 2004 were obtained at the county level and for the state as a whole from Census estimates. Population for 2005 was estimated by the Shimberg Center for each county by applying the growth rate for that county between 2003 and 2004 to the 2004 Census estimates. The results for each county were then summed to provide a state total.
- (6) Because no identifying information for individual households was available for LIHEAP, it was necessary to develop a method for estimating LIHEAP households in the relevant income categories that do not receive other public assistance. The Public Use Microdata from the 2000 Census allowed the Shimberg Center to arrive at the proportion of households above 125 percent of FPG and 135 percent of FPG that reported receiving public assistance on a county-by-county basis. Final estimates for each county of LIHEAP households above 125 percent of FPG and 135 percent of FPG were made

by multiplying the LIHEAP county-level estimates in step 5 by 1 minus the proportion of households reporting other public assistance payments for that county in the 2000 Census.

Supplemental Security Income (SSI)

SSI eligibility is not based on a simple income qualification process.⁵ Instead, qualification is based on a combination of disability status and income. The maximum monthly benefit for federal fiscal year 2005 was \$579, which translates into an annual benefit of \$6,948. Any individual who earns income outside allowable sources, such as student assistance, experiences a reduction in the maximum allowable benefit. At \$6,948, the maximum annual income for an individual receiving SSI is well below the poverty level. As presented earlier, the 2005 federal poverty guideline for a one-person household was \$9,570. The annual SSI benefit would therefore translate into an income of less than 73 percent of FPG. Because the annual SSI benefit falls well below the Lifeline and Link-Up income thresholds of 125 and 135 percent of FPG, the Shimberg Center did not analyze separate data on SSI participation as a part of this project. Those households are already a part of the baseline estimates already made by the Shimberg Center.

Section 8/Housing Choice Vouchers

Another qualifying criterion for Lifeline and Link-Up is receipt of federal housing assistance in the form of a Housing Choice Voucher (this program was formerly known

⁵ See Social Security Administration, 2005. and Workworld, December 16, 2005.

as the Section 8 Voucher and Certificate programs. Because the term Section 8 continues to be used frequently, we refer to the program here as Section 8/Housing Choice Vouchers). Generally, households qualify for these vouchers if they have incomes at or below 50 percent of area median income. This area median income figure is produced by the U. S. Department of Housing and Urban Development (HUD) each year and is adjusted for the number of persons in the household.

In Florida, federal public housing assistance in the form of Section 8/Housing Choice Vouchers (vouchers) is administered by more than 100 public housing authorities. Funding flows to these authorities through HUD. Data on vouchers suffer some limitations, as the federal data-keeping system for public housing authorities overwrites results from year to year. We were able to provide most of the time series (2000 through 2005) through data obtained and archived by the Shimberg Center in years prior to 2005. Data for 2000 were estimated by the Shimberg Center based on county-level growth rates in vouchers in use between 2001 and 2002. Estimation of the number of households above 125 and 135 percent of FPG qualifying for Lifeline and Link-Up through Section 8/Housing Choice Voucher participation was performed as follows:

- (1) Data for 2001 through 2005 were compiled at the county level through data provided by HUD. Data for 2001 also included some data developed through survey of individual public housing authorities in that year.
- (2) HUD was unable to provide 2000 voucher data. The Shimberg Center estimated the 2000 county-level data by calculating the growth rate for each county between 2001 and 2002, then subtracting that result from 1 and multiplying the figure by the number of vouchers for 2001.

- (3) In 2004, HUD's Jacksonville and Miami regional offices provided the Shimberg Center with detailed information on the household income of and household size of each voucher holder. This allowed the Shimberg Center to create an income distribution for each county by comparing each voucher holder's income and household size with 125 percent of FPG for 2004 and 135 percent of FPG. Overall, less than 10 percent of voucher holders in Florida have incomes above 125 percent of FPG.
- (4) The Shimberg Center created a ratio of above 125 percent and above 135 percent of FPG voucher holders for each county, based on the distribution created in step 3.
- (5) The Shimberg Center multiplied the ratio of households above 125 percent and 135 percent of FPG to the number of vouchers for each county for each year of the time series. This provided a raw number of households above those income levels receiving vouchers.
- (6) Because it did not have sufficient data on individual households for all years in the time series to determine the number of households that receive other forms of public assistance, the Shimberg Center estimated the number by multiplying the raw results obtained in step 5 by 1 minus the proportion of households above 125 percent and 135 percent of FPG reporting receipt of other public assistance in the 2000 Census for each county.

National School Lunch Program (NSL)

Students are eligible for free lunches through the NSL program if their household income is at or below 130 percent of FPG.⁶ Data are reported by the Florida Department of Education on the number of students receiving free lunches in each school district. For the Lifeline/Link-Up income criterion of 135 percent of FPG, these program participants have already been counted as part of the Shimberg Center's baseline estimate of households at or below 135 percent of FPG. For the 125 percent of FPG, only a very small proportion (less than one-half of one percent of the number of households at or below 125 percent of FPG) of the students participating in the free

⁶ See USDA, 2005b.

lunch program would be part of households with incomes above 125 percent, but no higher than 130 percent, of FPG. Further, detailed data on student households that would allow cross-referencing with data from other social programs was not available. Therefore, it was not possible to add NSL data in unduplicated form to the estimations of Lifeline and Link-Up eligible households in Florida. Because of the very small numbers involved, the Shimberg Center did not believe this has any meaningful impact upon the estimated number of households.

Lifeline and Link-Up-Eligible Households in Florida

Once data were analyzed for each relevant social program, they were added to baseline estimates of households at 125 and 135 percent of FPG for each county in Florida. County-level estimates were then summed to arrive at statewide totals.

When analyzing eligible households using the 125 percent of FPG baseline criterion, social program participation on the part of households with incomes above 125 percent of FPG accounted for slightly less than ten percent of all Lifeline/Link-Up-eligible households in Florida in 2005. When using the 135 percent of FPG baseline criterion, social program participation added less than seven percent to the total number of eligible households in Florida. Table 5 shows households at or below 125 and 135 percent of FPG as a percentage of all eligible households for the period 2000 through 2005. Table 6 displays the total number of eligible households calculated by using both the 125 and 135 percent of FPG baseline criteria, plus additional households above those baseline income levels with eligibility triggered by social program participation.

Table 5: Households at 125 and 135 Percent FPG
as Percentage of Total Eligible Households

Relative Importance of Social Programs to Eligibility

By far, the social programs that contribute the highest number of eligible households above the baseline income criteria of 125 and 135 percent of FPG are those administered by DCF, namely TANF, Medicaid, and Food Stamps. In 2005, the DCF programs accounted for approximately 92 percent of the households above the 125 percent baseline who qualified based on social program participation. For the 135 percent baseline, DCF-administered programs provided nearly 93 percent of the above-baseline income households eligible for Lifeline and Link-Up.

In contrast, households above 125 percent of FPG but eligible for Lifeline and Link-Up due to participation in the Section 8/Housing Choice Voucher program were less than five percent of the households in that income category with eligibility provided through social program participation in 2005. Households above 135 percent of FPG made eligible to participate in Lifeline and Link-Up through the voucher program were also slightly less than five percent of households in that income category with eligibility triggered through social program participation.

Finally, LIHEAP participation analyzed against the 125 percent of FPG assumption accounted for less than three percent of the added Lifeline/Link-Up-eligible households in 2005.⁷ When using 135 percent FPG as the baseline income criterion, LIHEAP added approximately five percent more households to Lifeline/Link-Up eligibility in Florida.

⁷ In 2000 and 2001, Florida's LIHEAP did not serve any households above 125 percent of FPG.

Overall Importance of Social Programs to Total Eligible Households

Using the 125 percent of FPG baseline, DCF-administered programs (TANF, Medicaid, and Food Stamps) received by those above the baseline made up slightly more than six percent of all Lifeline/Link-Up-eligible households in Florida in 2005. Under the 135 percent of FPG scenario, eligibility by households above the baseline triggered by DCF programs were nearly nine percent of total Lifeline/Link-Up-eligible households in Florida in 2005.

Working from the 125 percent of FPG baseline, those households above that income receiving Section 8/Housing Choice Voucher assistance made up approximately one-half of one percent (0.5 percent) of total Lifeline/Link-Up-eligible households in Florida in 2005. Under the 135 percent of FPG assumption, Section 8/Housing Choice Voucher recipients above the baseline income made up approximately three-tenths of one percent (0.3 percent) of all Lifeline/Link-Up-eligible households in Florida in 2005.

Finally, using the 125 percent of FPG baseline, LIHEAP participation among households with incomes above the baseline made up about three-tenths of one percent (0.3 percent) of total Lifeline/Link-Up eligibility in Florida in 2005. With the 135 percent of FPG baseline, LIHEAP participation among households above the baseline income accounted for approximately two-tenths of one percent (0.2 percent) of the total eligible household figures for Lifeline and Link-Up in Florida in 2005.

Detailed county-level estimates at each income level and among social program participants are presented in the Appendix to this report. The Appendix also contains

detailed household characteristic data that include age, race and ethnicity, status as a female-headed household, household tenure (owner or renter), and level of education of the head of household.
